Value Check

Benefit from an ROI-focused analysis

apexanalytix firststrike software has saved companies billions by protecting against disbursement errors and unlocking insights previously hidden inside large data stores. To help clients improve controls, maximize the prevention of overpayments and optimize operational reporting, we offer the apexanalytix Value Check. Whether you are a new or longstanding firststrike user, a Value Check can offer the comprehensive analysis and consulting you need to get the most out of your firststrike investment.

Through the Value Check process, apexanalytix consultants review how you are using firststrike and help you fine-tune your software to your company's needs to protect against overpayments and fraud, realize new cost and time savings, and power strategic initiatives—from payment terms optimization to new global reporting initiatives. Value Check services can be especially beneficial when you make changes to your ERP platform, experience staff turnover, launch new procure-to-pay processes, or pursue mergers, acquisitions or divestitures.

DATA DISCOVERY

We begin by understanding your strategic business objectives and how firststrike can be leveraged to drive, inform and enhance them. We take a deep dive into your procure-to-pay operations, software configuration and data captured in your firststrike repository. We also identify any pain points, challenges, opportunities or anticipated changes related to your systems, processes and business objectives.

FOCUSED RECOMMENDATIONS

Based on industry benchmarks and our extensive experience working with the Global 2000, we help you identify performance gaps and determine where to concentrate your efforts for the maximum advantage. You get everything you need to achieve better, faster outcomes. We deliver both a comprehensive report of our findings and a detailed action plan to guide your improvement initiatives.

BROAD BENEFITS

Our consultants focus on ways to save time and money and improve your bottom-line results. Typical outcomes from a firststrike Value Check include third-party audit cost savings, process improvements, higher capture rates for overpayments and credits, and an immediate return on your firststrike investment.

FLEXIBLE ALTERNATIVES

You can benefit from a firststrike Value Check at multiple points in your software lifecycle. We support initial firststrike implementations, conduct targeted reviews to help you address emerging challenges, and offer annual reviews to help you achieve optimal results over time.

A BROAD ECOSYSTEM

You can extend the return on your firststrike investment by adding other modules. You can also support all your supplier-related enterprise systems and ERPs from a single portal with our apexportal supplier portal software. Each solution uses the latest in cognitive analysis and predictive analytics.
